

Powered by Mother Nature

Nature does it's own composting. In warm weather, natural aerobic soil micro-organisms digest and transform leaves, grass and other organic material into hygienic, non-offensive soil compost. This in run adds nutrients for new plant growth and retains moisture in the soil.

BioLet unites this natural process with patented technology to accelerate and optimise biological decomposition, evaporate excess liquid and vent odours and water vapour ... all within an attractive home appliance that is easy to use and economical to operate.

Easy to Install

Each composting toilet comes complete with everything required for the typical installation and start-up. Simply attach the mounting brackets to the wall, install a ventilation pipe through the roof, pour in the included starter mulch and plug the unit into a standard 220V AC outlet (electric models only). Anyone with basic DIY handyman skills can install a unit in a few hours with the usual household tools.

As the material composts it falls into a convenient tray in the bottom of the unit, which is emptied once every 2 months to a year (depending on use).

Included with every unit

- 12 ft. ventilation kit (shown above)
- Mounting kit
- Bag of starter mulch
- Installation manual
- Manual mixing rod (manual models)
- Drain tube (non-electric models)

Specifications

Dimensions:

Komfort H65 W55 D71 cm

The Most Popular Composting Toilet

Biolet, with over 40 years on the market, is the world's first self-contained composting toilet! Bioilet continually improves product lines and has become the best selling Composting Toilet in the World. Bioilet's superior design gave them prominent recognition as a gold medal recipient at the international inventor's Exhibition in Geneva, Switzerland for the year's best invention in the environment field.

BioLet Komfort/XL

- Fully automatic
- Electric -220VAC
- 4 people full-time use
- 6 people part-time use

For larger families or residents, the BioLet Komfort and Komfort XL is the right choice.

These units are fully automatic, the XL has a 40% larger composting chamber, two heating elements, ventilation fan, advanced mixing mechanism, and excess liquid sensor. Previously tested and approved by various national sanitation departments worldwide, the BioLet XL has exceeded all testing requirements by a wide margin and was proven to be the safest composting toilet available.

BioLet Deluxe

- Fully automatic
- Electric -220VAC
- 3 people full-time use
- 4 people part-time use

The BioLet Deluxe is the perfect solution wherever you don't need the extra capacity of the XL, yet still desire the convenience of a fully automatic system. The BioLet Deluxe has a fully

automatic mixing mechanism, heating element that ensures optimal composting at 18°C and ventilation fan. Simply lower the seat after each use and your BioLet does the rest!

BioLet Standard

- Semi automatic
- Manual mixer
- Electric -220VAC
- 3 people full-time use
- 4 people part-time use

The BioLet Standard is a low-energy appliance ideal for Renewable Energy locations. It contains an electric

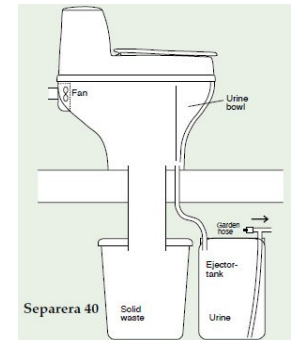

heater and fan to assist the composting process, evaporating excess liquids, regulating the temperature and providing additional air flow. The Standard has a manual mixer – simply turn the T-handle a couple of times after each use!

BioLet Separera

(Basement installations)

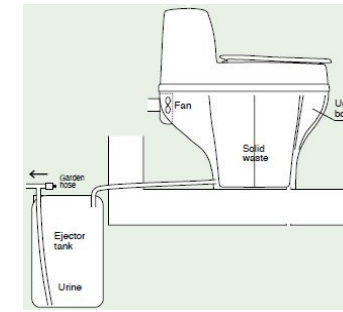

- Manual mixer
- Electric -220VAC
- 2 people full-time use
- 3 people part-time use

For basement installations this unit is supplied with a separate container that is ideal for installation under the floor. The liquid and the solid matter are separated while it is being used which requires a drain tube to a second below-ground level container. The unit is fan-assisted to ensure optimum aeration.

BioLet Separera NE

- Batch Composter
- Non-Electric (Solar fan option)
- 2 people full-time use
- 3 people part-time use

use

The BioLet Separera NE is the ideal model toilet for remote locations where electricity is not available.

Two containers are supplied, one in use and the other for composting storage if required. This model requires a drain tube to a soak-away or to a 5 litre container installed below floor level.
